I am determined, ambitious and friendly person who tries to find useful and less complicated problem solutions. I have chosen a front end as I like coding and I am perfectionist. I am a self-learning person who aims to become a full stack developer. My skills are increasing as I am coding each day. I hope my new employer will help me out with my programming journey as I still want to improve myself.

COURSES

★ Online | Kodilla.com | Front-end Developer

09.2017 – 03.2018
I have chosen this course as I am front end developer passionate. Twenty-four-weeks-long online coding bootcamp supervised by Full-Stack Developer with over 7 years experience where I have been developed my skills in HTML/CSS/JavaScript/ES6/React and Task runners. Bootcamp was split into twenty-four modules, with minimum 4 practical exercises each module to consolidate my knowledge. We had to send our solutions to get a Code Review, and once all code was correct, we received approval. All my tasks were approved and I completed entire course. Thanks to this course my skills and my motivation to continue the programming journey have increased.
